WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

A clean 200 L open-head drum, 572 mm across, 851 mm tall, that held only a non-flammable, non-toxic product. Burn off paint outdoors first.

Air ports: four, 40 wide x 110 tall, bottom edge 20 mm above the floor, on the four diagonals (front left, front right, back left, back right; the tap is on the right). Drill the corners 6 mm, cut between with an angle grinder and thin disc, file the edges.

Probe hole: one 10 mm hole at the back, 361 mm above the floor.

Damper guide rivet holes: 4.9 mm, two above and two below each port (see the damper sketch CCB-DWG-103).

Deburr every edge; fold or file any sharp lip.

Check: the lid and locking ring still close on the rim.
