WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 400 mm of 160 x 2 mm plain steel pipe; square the ends.

Air holes: two rings of fifteen 12 mm holes (24 degrees apart), 95 and 135 mm above the bottom end; the upper ring turned 12 degrees from the lower. Wrap a paper template round the pipe.

Probe hole: one 8 mm hole at the back, 330 mm above the bottom end.

Fixing: four 4.9 mm rivet holes 20 mm above the bottom end, drilled through the collar once the throat stands in it.

Shroud tab holes: six, 200 mm above the bottom end (drill with the shroud in place, CCB-DWG-107).

Check: stands square on a flat plate; holes deburred inside.
