WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Sleeve: a 150 mm wide strip of 1.5 mm sheet rolled to 230 mm outside diameter, overlap riveted.

Top ring: a 230 mm disc with a 160 mm hole; cut six tabs 15 mm wide into the hole edge (before cutting it to size) and fold them up 20 mm. Fold or rivet the ring onto the sleeve top.

Fit: slide over the throat, bottom edge 40 mm above the lid (a 40 mm block under it while drilling); rivet the six tabs to the throat. The air holes sit inside, 55 and 95 mm above its bottom.

Band damper: a 60 mm wide band of 3 mm strip rolled to fit round the sleeve, with a riveted nut and an M6 wing screw. Open: up on the sleeve; closed: slid down to the lid.

Check: the band slides and the wing screw holds it.
