WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut a 420 mm disc from 1.5 mm sheet with a 210 mm hole in the middle (the hole clears the flue and its stop clips).

Locating tabs: three 20 x 15 mm tabs riveted under the lid, folded down, 2 mm inside the shell, 120 degrees apart.

Vent: a 27 mm hole 170 mm from the centre; a 3/4 in steel nipple 80 mm long through it, held by a locknut each side.

Fit: rests loose on the shell rim. It is never fixed, sealed or weighted: the jacket must stay open to the air.

Check: lifts off by hand; the vent is clear.
