WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Pan: cut 760 x 600 mm from 3 mm mild steel plate; grind the edges and round the corners to about 10 mm. Mark a 572 mm circle in the middle with a centre line each way: the drum stands on it.

Board: cut a 600 x 600 mm square from a 25 mm ceramic fibre board sheet (1260 deg C grade) with a fine saw; wear a dust mask.

Cut a groove 4 wide x 4 deep in its underside, from 150 mm behind the centre, 50 mm left of it, straight out to the back edge.

Block thermocouple: lay its tip on the back block in line with the groove, 150 mm behind the centre; the lead runs out at the back.

Fit: blocks, then board centred on them, then the pan on the board.

Check: the pan rests flat without rocking; the lead is not pinched.
